MAIN INTERESTS

I am an structural microeconomist, with interest in public economics, urban economics, and environmental economics. My research addresses questions related to population ageing, climate migration, real estate, and urban renewal. I rely on both microeconometrics and structural tools, using highly spatially disaggregated data. I also enjoy teaching and am a defender of open data for science.

I am on the 2026-2027 job market. In my JMP, I open the black box of housing supply costs and investigate the role of supply frictions and market failures in explaining low redevelopment and high housing costs.
